

Field Viability

Systems shown (top to bottom):

ROS-based systems  
GPT-5.2  
Claude 4.5  
Gemini 3  
Copilot  
Perplexity  
NotebookLM

## Speculative Capacity

Figure X. Alignment between speculative capacity and field viability across contemporary AI systems. The horizontal axis represents speculative capacity, while the vertical axis represents field viability. Systems are positioned to indicate relative alignment along these dimensions based on qualitative comparative judgment, rather than formal scoring or evaluative ranking. Spatial proximity and relative placement are intended to illustrate structural tendencies and relationships, not performance assessment.
